Applications & Use

The goal of the International Shore Connection is to keep a standby hose attachment to get a connection from shore or from other ships for onboard firefighting, in case there is a total failure of pumps onboard.

The connection should be made up of steel or other suitable material and shall be designed for 1.0 N/mm² services. The flange should have flat surface on one side and other side should be permanently connected or attached to a coupling which can be easily fitted to ships hydrant and hose connection.
